

EJC Products

The EJC product line is a unique hybrid polyurea that passes the testing needed for highways, bridges and airports that no other product of its kind can achieve. EJC-25, EJC-25NS and EJC-50 have the durability to hold up to joint expansion and contraction and daily abuse of road traffic. Even under extreme weather conditions, they retain the high performance characteristics needed for years to come.

Expansion Joint Product Benefits

The Expansion Joint product line provides you the ability to repair concrete expansion joints in everything from airport runways and highways, to parking decks, bridge decks, roofing and sidewalks. EJC-25 is the perfect product for all joints, with an engineered joint movement of 25%. EJC-25NS is a non-sag formula that allows for vertical and sloped application. EJC-50 is best utilized for joints that have been engineered for 50% movement, such as bridges and airports. All EJC products are jet fuel and Av-gas resistant.
